SAATHI

Plan Smarter. Travel Better.

AI-Powered Multi-Agent Travel Planning Platform

Dream → Plan → Book → Trust → Travel

Problem Statement

Travel planning is high-effort, and generic tools don't adapt to real constraints

Several

disconnected apps used per trip

search engines, ChatGPT, YouTube, maps, spreadsheets, Skyscanner, Booking.com, MakeMyTrip, WhatsApp threads

— research, plan, book, and manage a single trip, stitched together by hand.

1

Fragmented experience

Planning is split across several disconnected apps with no continuity of context.

2

Personalization gap

Generic "Top 10" lists ignore specific constraints like budget, accessibility, or vibe.

3

Budget friction

Manual spreadsheet tracking can't keep up with real-time price fluctuation.

Who We're Building For

Meet the four traveler types Saathi is designed around

P1

Solo Traveler

Rohan, 26 · Dev

GOAL

Independent exploration, flexible plans, safety, budget optimization

FRUSTRATION

Time-consuming multi-platform research, generic recs

Complexity: Medium

P2

Friends / Group

Akash, 28 · Marketing

GOAL

Fun shared experiences, balanced activity-focused trips

FRUSTRATION

Aligning preferences, splitting expenses across the group

Complexity: High

P3

Couple

Arjun & Meera, 28/26

GOAL

Meaningful, aesthetic, well-paced quality time

FRUSTRATION

Generic recs, choice overload, hard to curate pace

Complexity: Medium

P4

Family

Sneha, 35 · Marketing

GOAL

Safety, comfort, structure for children & elderly

FRUSTRATION

High planning effort, budget unpredictability during travel

Complexity: High

Every one of them wrestles with the same three problems: fragmented planning, generic recommendations, and budget guesswork.

Proposed Solution

Why: our research found two separate problems — planning fatigue, which an AI assistant can genuinely reduce, and platform trust issues like fake listings and slow refunds, which no amount of AI can fix by over-promising. So we scoped the product to only what's actually controllable.

Key decision: Saathi never becomes the merchant of record. It focuses on discovery, planning, and budget tracking — and hands the booking transaction to the vendor's own platform.

What Saathi actually does

1. **Curated travel destination recommendations**
2. **Itinerary suggestions**
3. **Redirecting users to book**
4. **Track budget**

Key Features & Framework

What travelers need: plan a complete trip, balance everyone's preferences, and find good options — without spending hours across a dozen apps. Six modules deliver that, dream to memory.

1 Dream

Destination matches based on budget, dates, and group size — not a blank chat box

2 Plan

Itinerary built around real preferences — stay, food, and pace

3 Book

Each booking type redirects to its designated vendor — every confirmation kept in one place

4 Trust

Costs shown as clear estimates. Hotels are checked against real places nearby and matched to the stated budget.

5 Travel

Planned-vs-actual budget tracking, live today. Disruption re-planning: post-MVP.

POST-MVP

6 Remember

A quick rating after every trip — using it to personalize future trips comes later

POST-MVP

Implementation & Process

A multi-agent pipeline — each agent specialized, every AI claim verified before it reaches the user

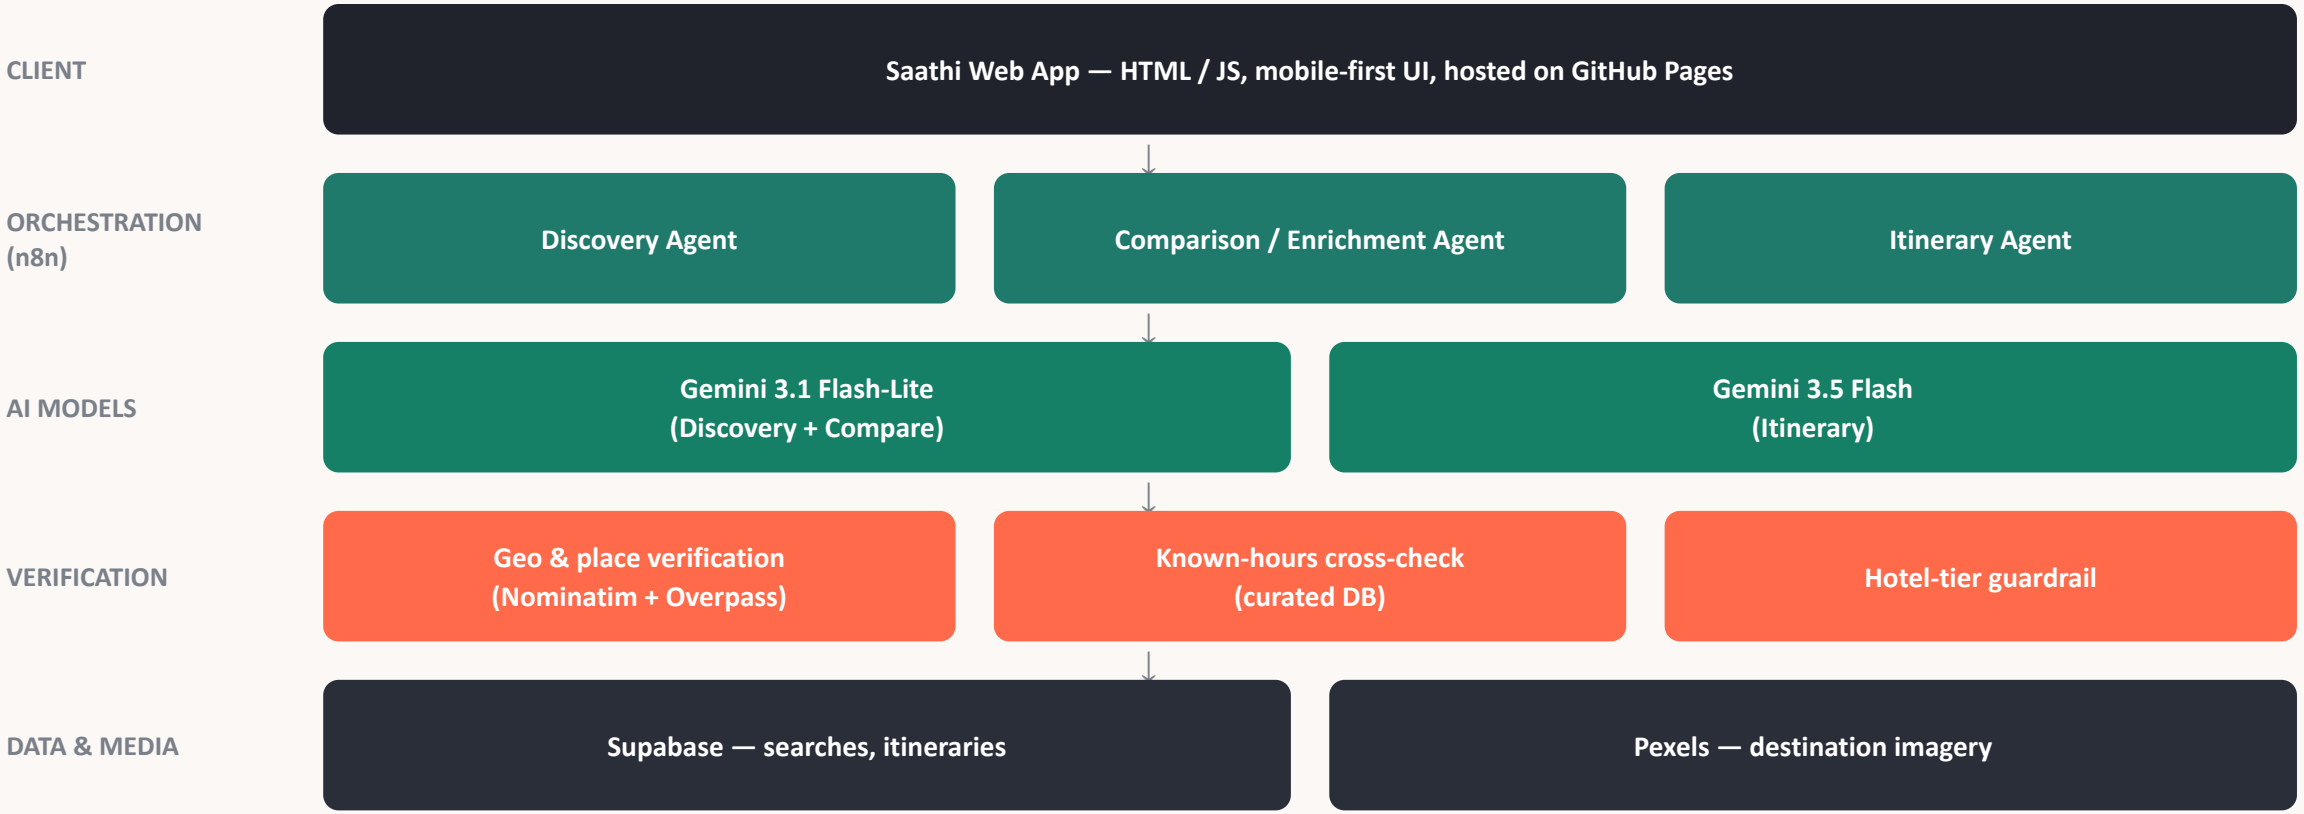

Verification layer catches what the model gets wrong before the user ever sees it

Stack

- HTML / JS
- n8n workflows
- Gemini 3.1 / 3.5
- Supabase
- OpenStreetMap
- Pexels

System Architecture

Five layers — client, orchestration, models, verification, and storage

The verification layer sits between the model and the user on every agent call — nothing reaches Supabase or the screen unchecked.

Revenue Model

Two tiers — what's monetizable now, and what unlocks once the premium layer is built

MVP — buildable now

₹ **Booking commission**

Applies to hotels, flights & buses —Affliate agreements are not yet validated

Post-MVP — premium tier

+ **Multiple itinerary options —** see 2-3 AI-generated variants instead of one

+ **Disruption re-planning —** automatic re-plan when something changes mid-trip

+ **AI assistant fee —** ₹150/trip or ₹49/day for on-demand in-trip help

Market Opportunity

TAM

India Online Travel Market

$25.4B (2026) → $38.6B by 2031

SAM

Our addressable segment — domestic, digital-first

≈ $8.7B (~₹72,000 Cr)

SOM

Our target — at 3% commission on eligible SAM

₹16.2 Cr (Yr 1) → ₹81 Cr (Yr 3) revenue

TAM: Mordor Intelligence (2026), includes international travel

SAM: TAM × ~65% domestic × ~70% independent/leisure × ~75% mobile-first bookers

SOM: SAM × 1% × (3%-5% commision) × 75% (Excluding 25% as IRCTC does not provide any commissions)

How We'll Measure Success

The definitions, and how each one gets tracked

North Star: Completed trips / month — a platform-wide total (all users combined), not a per-user average. A trip counts once at least one leg is confirmed booked in the app.

ACQUISITION	ACTIVATION	RETENTION	REVENUE
Do people who try Saathi sign up?	**Do new users finish planning?**	**Do travelers come back?**	**How many bookings earn us money?**
% of searches that turn into a real account	% of accounts that complete their first itinerary	Reopen mid-trip, and return for their next trip within a year	Only bookings tracked through a vendor's affiliate link — not live yet

Go-to-Market Strategy

TARGET	POSITIONING	ACQUISITION	ACTIVATION	GROWTH LOOP
Independent travelers, 22-40 — solo, couples & small groups planning 3-10 day trips	"Not another booking site — the planning & trust layer before, during, and after the trip"	Instagram/Reels content, nano/micro-influencer travel creators, Reddit communities, referrals	Complete a personalized itinerary in one guided session	Referral-led today; a share-and-collaborate loop unlocks once Plan Sharing ships (Post-MVP)

Future Scope

What's next, in two horizons — building on what's already working

Near-term

- Real-Time Availability & Inventory Check
- Vendor Comparison Selector
- Improved Vendor Integration & Smart Prefill
- Multiple Itinerary Options
- Automatic Booking Confirmation
- Itinerary Re-generation After Disruption

Later

- Automatic Budget Sync via Bank/Card Integrations
- Proactive Disruption Intelligence
- Advanced Itinerary Editing & Live Trip Updates
- Nearby Discovery & Contextual Recommendations
- Trip Memory & Personalized Re-Recommendation
- Group Planning & Expense Splitting
